COMFORT

Technical information

- Weight: 13,35 kg
- Load: 150 kg
- Measurements (folded):
 - Height 120 cm
 - Width 57 cm
 - Depth 21 cm

Not everyone who uses the lifts daily, realises that these lifts cannot be used if they breakdown or may NOT be used when there is an emergency (such as fire). Then they have to leave the premises via the emergency staircase. In practice, you find that not everyone is able to do this. Even if you have a good evacuation plan in place, it is possible that there are people present that might face an unexpected potential risk during an emergency.

With the help of the Escape-Chair® just one operator can bring a physically-dependent person down the stairs to safety. For steep stairs, we suggest that you work with two operators. This evacuation chair is ready in seconds, easy to use and descends quickly and controllably down the stairs. The Escape-Chair® comes in various designs, so that for every business and situation, a solution can be found.

We provide a building/evacuation analysis, at your premises. Here, we can provide you with advice on suitable escape routes and recommend evacuation aids to suit your situation.

- on site assessments of your buildings
- pro-active training
- servicing on all of the equipment

Over 15 specially trained service and training co-workers operate in the UK. In over 15 Regions they take care of optimal servicing and training in using the evacuation equipment in your building.

STANDARDPLUS

- Aluminium frame
 - Standard headrest
- Can be up-graded to include:
- Anti-slip on handle
 - Padded head rest
 - Improved seating
 - Foot rest

Escape-Carry Chair®

In the majority of cases, the emergency escape route goes downwards. However, there are some circumstances where the escape route goes onto a higher level. For these situations it may be necessary to have an evacuation chair that can also be used as a carry chair. The Escape-Carry Chair® is fitted with carrying handles located on the top and the underside of the chair. So, with the help of two or more people, the chair can be used in this way, too.

HOW DOES THE CHAIR BRAKE?

The unique glide/brake system makes the braking of the chair possible on different kinds of stairs, from wood to concrete. This braking system is optimised by the weight of the evacuee, together with the pressure of the operator pushing down on the handle in the direction of the stairs. **All Escape-Chair® models are supplied with protectively enclosed glidebelt cassettes, helping to reduce risks.**

6 YEAR WARRANTY

All our Escape-Chairs come with a 6 year warranty (not including general wear and tear).

We reserve the right to modify the technical and optical specifications.
